Mr. Nissen ASAP.  
Thank you.

If you do not receive all the pages, please call back as soon as possible. 203-438-6198.

# MEMORANDUM

TO: Aaron Nissen  
FROM: Richard J. Monro  
DATE: September 20, 1991  
RE: Flame Stabilizers, Intermountain P.O. #92-49945

---

We have not received the size and location of all the penetrations in the flame stabilizer for the clockwise and counter clockwise rotations. We had hoped to receive these by Thursday, September 19, 1991. We define clockwise rotation as the rotation of the air as seen from the windbox and looking into the furnace. Please define the CW and CCW convention in your drawing.

We urgently request expediting of these drawings. We must receive this information no later than the morning of September 24th in order for us to make our October 21st delivery date. Beyond that time, for every day the information is delayed, the delivery date will have to be delayed as well.

Thank you for your prompt attention to this matter.
